The article looks further into the effects of human-caused climate change, it describes the connection between human-caused climate change and the global climate. The author of the article states that the climate change is not from natural causes, but the leading cause of global warming is the increase in greenhouse gas emissions from human activities. The article also states that the effects of climate change are not only global warming, but also sea level rise, extreme weather events, and other impacts.

The purpose of this article is to inform the public about the effects of climate change. The author states that this information is not something to be ignored about. The author is emphasizing the need for the public to take action and that it is not too late to do so. The author also states that the effects of climate change are not just global warming, but also sea level rise, extreme weather events, and other impacts. The author also states that the effects of climate change are not just global warming, but also sea level rise, extreme weather events, and other impacts.

The author also states that the effects of climate change are not just global warming, but also sea level rise, extreme weather events, and other impacts.
